

Central office functionality in your lab, without live circuits.

ATLAS 550 for WAN Emulation

The ATLAS 550 from ADTRAN® makes it possible, for the first time, to affordably simulate live Frame Relay, ISDN, and analog POTS circuits, without purchasing circuits and incurring toll charges. Now, network engineers, design and test engineers, even classroom instructors, can easily stage what-if scenarios, or test new technologies off-net. Just ask the Cisco Networking Academy. They selected the ATLAS 550 as standard equipment for the CCNP™ program, so students enjoy a more in-depth, real-as-it-gets experience in configuring routed WAN networks.

The ATLAS 550 eliminates the high costs previously associated with WAN emulation, bringing a plug-n-play approach to a once complex and cumbersome task.

ADTRAN. Ask for it by name.
